The Influenza PCR Test is used to detect Influenza (flu). Influenza is a contagious respiratory illness that can limit your breathing, causes cough, fevers or chills. It is caused by Viruses that can lead to mild or severe illness. GoldenPoint offers a high complexity Robust Influenza PCR test for influenza virus Types A and B.

About the Influenza PCR Test

Molecular assays available for detecting influenza virus infection include rapid molecular assays, Reverse Transcription-Polymerase Chain Reaction (RT-PCR), and other nucleic acid amplification tests. These tests can detect influenza viral RNA or nucleic acids in respiratory specimens with high sensitivity and high specificity. Notably, the detection of influenza viral RNA or nucleic acids by molecular assays does not necessarily indicate detection of viable virus or on-going influenza viral replication.

The OPTI SARS-Co V-2/Influenza A/B RT-PCR Test is a multiplex real-time reverse transcription polymerase chain reaction test intended for the simultaneous qualitative detection and differentiation of SARS-Co V-2, Influenza A , and /o r Influenza B virus RNA in nasopharyngeal swab specimens collected from individuals suspected of respiratory viral infection consistent with COVID-19 by their healthcare provider. Clinical signs and symptoms of respiratory viral infection due to SARS-CoV-2 and Influenza can be similar.
