Toxicology panels are laboratory tests that are used to detect the presence of drugs or other toxic substances in the body. There are different types of toxicology panels, each designed to detect specific classes of drugs or toxins.

Toxicology panels may be used for various reasons, including screening for drug use, monitoring compliance with drug treatment, evaluating suspected drug overdose or poisoning, and assessing occupational or environmental exposure to toxic substances. The specific tests included in a toxicology panel will depend on the reason for testing and the clinical presentation of the individual being tested.
